OurPLANE Reaches Safety Milestone

Buffalo, NY...OurPLANE, the world leader in fractional light aircraft ownership, is proud to announce that it has flown over 25,000 hours without any accidents. OurPLANE attributes this outstanding safety performance to a number of safe flying parameters including higher total time requirements for fractional share owners to fly advanced aircraft and OurPLANE's mandatory safety and recurrency policies for all OurPLANE pilots.

OurPLANE's policy of free semi annual checkrides means every OurPLANE customer (either customers who purchase OurPLANE FlySMART jet cards with 25 or 40 annual hours or a customers who purchase fractional share shares) must undergo a stringent safety reassessment every six months. This emphasize on safety for OurPLANE's piston aircraft was industry leading when OurPLANE launched it in 1998, and it's value in keeping OurPLANE shareowners safe and current clearly contributes to their remarkable safe flying record. OurPLANE will offer the same level of initial and recurrent training for both Pilots and corporate Pilots (for non pilot shareowners) in their Eclipse VLJ fractional program. OurPLANE's first VLJ, serial # 66, lands in Jacksonville, FL in late fall of 2007.

"OurPLANE continues to pioneer the safest, most cost effective fractional program available," says Graham Casson, CEO of OurPLANE Inc. "We're proud of our safety record and believe it is one of the reasons why small businesses are turning to us to provide them with their hassle-free (and safe) business travel needs."

OurPLANE is the world leader in fractional light aircraft ownership. OurPLANE currently has 20 new aircraft in operation in 15 different locations across North America. OurPLANE recently announced the purchase of 21 Eclipse 500 VLJs with delivery starting in Jacksonville, Florida in 2007. In February, OurPLANE will be announcing a value-added, revolutionary travel discount program for our customers called TravelSMART.
